

# Quad Preparation

July 2019

## Soldering

If you intend to do our I Can Solder button project, we will provide all the supplies.

## Sublimation Printer

You will need to bring an image file (.png or .jpeg) on a flash drive. If you would like to make a coaster or book mark, the materials will be provided. If you would like to bring your own item to print on, make sure it is at least 50 percent polyester.

(The maximum size of the printed area is 8 x 11 inches.)

## Roland Vinyl Cutter

Bring a silhouette image, saved on a flash drive as a .jpg or a .png.

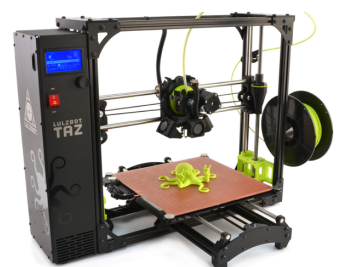

Have a close idea of what size you would like the image. (Maximum size is 12 x 12 inches.)

## 3D Printer

Files should be brought on a flash drive. The file types that are used are .stl and .obj.

The maximum size is 11 x 11 x 9 inches. The maximum printing time allowed is six hours. (Printing time can not be determined until item is seen.)

## Heat Press

You will first need to cut out the image on the vinyl cutter. (See Roland Vinyl Cutter instructions, above.) Bring an item that is 100% cotton, poly/cotton blends, or 100% polyester.

## Mat Cutter

Bring in the actual picture you wish to mat. Have the dimensions of the frame you are going to use.
